Survey Vessel:
.Catamaran near shore survey vessel

Length Overall / Draft:
.36' / 1.5m

Fuel
.2,000 litres

Duration
.2 weeks typical survey

Used extensively in western Canadian Arctic incl. Mackenzie River and Beaufort Sea for hydrographic surveying, sub-bottom profiling and coring.
Shallow draft, high payload, remote camp deployment for surveying in remote, unknown environments.

Geographic Region
.Canada Wide (trailer-able)
.Shallow Water River systems, larger river systems, near shore marine environments

Beaufort Explorer

Usage:

- Multibeam
- Single Beam
- Side Scan
- Sub-Bottom
- Vibe Core
- Box Core Sampling

Long Term Deployment
Research Vessel

Large aft deck & A- Frame
for deploying research
equipment
